better
employee
productivity

Is your facility or corporate center equipped to protect your staff while promoting improved employee experiences?

A recent survey conducted by Harris Interactive® among more than 1,000 U.S. adults ages 18 and older revealed what experiences negatively impact a customer's perception of a retail store. Ninety-nine percent of U.S. adults reported that any poor cleanliness issue would negatively affect their perception. More specifically, dirty restrooms and unpleasant odor are top annoyances over poor customer service. Top negative customer impact drivers 95% unclean restrooms, 92% unpleasant odor, 86% dirty floors and 81% spills or stains. *Source Cintas*

Cost Control

Occupational Health
and Safety

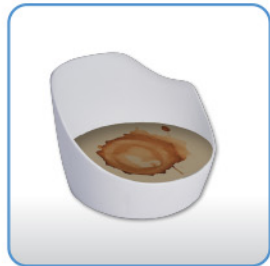

Customer Experience

Cost Control - The annual cost of facility borne infections ranged from \$4.5 billion to \$11 billion. Although there is no data directly related to cross-contamination through urine and fecal matter, it is clear that many pathogenic organisms can be transmitted through this process. The Tossaway Can reduce the risk of exposure to fecal matter and urine thereby reducing its associated cost.

Occupational Health and Safety - The Tossaway can reduce employee workers exposure to pathogenic organisms found in fecal matter and urine during routine bathroom visits. Plunger docking stations or positioning a plunger directly on the floor increases exposure time. This potentially increases occupational injury risk as a result of increased contact with fecal matter or urine. When used properly the Tossaway eliminates the need to clean fecal matter from the floor or docking station.

Customer Experience - Ninety-nine percent of U.S. adults reported that any poor cleanliness issue would negatively affect their perception of a commercial facility or retail environment.

Why facilities, restaurants and hospitals need Tossaway

- **Plunger docking stations** often used by facilities, restaurants and hospitals create germ laden reservoirs that are hard to clean without exposing workers to pathogenic organisms. These docking stations also produce unpleasant odor.
- **Positioning plungers correctly** on the floor can expose patients, and workers to disease causing organisms. Additionally cleaning plunger rings from the floor increases exposure risk the cleaning staff or healthcare workers.
- **Features and Benefit**
 - Proves customer experience while driving return customers
 - Reduces bathroom odor with the “use activated pad”
 - Minimizes employee's exposure to bathroom born pathogenic organisms
 - Communicates a quality message to customers
 - Provides a clean and sanitary method of containing toilet debris
- **Our patent pending technology** provides you the best solution to deliver meaningful value to your facilities
